

Against

Aim of the project

This project aims to develop and implement innovative methods in learning and teaching methodologies and pedagogical approaches, especially those delivering key competences and basic skills in media literacy education, language skills, and focusing on the use of ICT. We will improve the quality of the skills which are recognized as essential at European and national level, and raise awareness of their relevance at school and community level.

Education, including non-formal learning, is the most powerful vehicle to promote common values, social inclusion and improve social integration and social mobility. In a digital society, media literacy the topic on which the Project focuses on, as a combination of digital and cognitive skills, plays an important role to promote EU values and social inclusion.

Online

Mobilities

1) Italy Cefalù

29-03/11/2021

During the mobility, students presented their schools, shared experiences about distance learning, successes and challenges, talked about the virtual platforms used during quarantine.

2) Portugal Felgueiras

21-25/02/2022

During the mobility, students listened and did presentations about online slavery and learned which points they should be more careful about while using social media.

Slavery

Mobilities

3) Lithuania Skuodas

02-06/03/2020

The school held activities for students to get to know each other better and taught the students the importance of Internet safety. They had many fun workshops such as wool felting, making posters, manipulating photos with a green screen and played an internet safety game.

4) Romania Craiova

23-27/05/2022

During the mobility, students debated about online news vs newspaper. The school gave them a presentation about writing. It helped improve their writing skills.

Memories
