

## Experiences from Students

The bond between the students is unforgettable. The amazing experiences made a lot of impact on their life. Not only do they learn about our planet earth, but they also encourage other students to be aware of our planet's current situation and spread awareness across the world. Students from Türkiye, Finland, Spain, and Croatia are going back to their homes with great experiences and a lot of memories to tell. When hosting, they get the chance to have a friend from another country and the same while visiting too. But the most important thing is that this is not a thing that all people can experience. Students are not just visiting and coming back. They learn about their friends' lifestyle and culture while staying with them. And when they grow up, they will see the benefits of these great experiences in their lives. So let us give the microphone to the students who have experienced this project...

"Thinking about the adventures I had. I adored the whole journey. During my journey I met amazing people, kind families and much more. The interaction between students are so valuable. We are gaining a lot of experiences while learning about our planet Earth. The importance of this project is that we encourage ourselves and our friends to reuse, recycle and save our planet. Having wonderful memories, making close friends, getting more

aware of our planet and the most important, getting along with all the world in just a week was mind-blowing. *I am so lucky to be a part of this.*"

*"We have learned a lot from different cultures, the most interesting thing is to learn the habits that these countries have."*

*"The best part of the project is getting to know about different cultures and manners. Also getting to meet people from different countries and making friends and connections."*

*"These trips are not about how much you knew but how much you learned."*
