

Before the third LTTA in Croatia the participating students were given a Smart School task, in which they collected information in their schools about the management of the resources such as electricity, water, food, waste, school surroundings etc. On the basis of the analysis of this data they worked for possible solutions for individual schools and the surroundings around them and presented these during the meeting. During the week the students worked in international groups, and we also had other project related activities e.g. visiting ZMAG, a Green Network of activists in Vuomeric, Vetrpack Straza, the leading glass packaging manufacturer in Europe and the wastewater treatment plant of the city of Zagreb. We also had a chance to learn to know some Croatian culture and visit some historical and cultural sites in Zagreb.

During the teachers' meetings the teachers went through Step 3 of the project to make sure that everything has been done or to be done during the local activities. The partners also checked the present stage of the eBook and agreed on the next

activities that will be prepared for it during Step 4. The preparations for the LTTA4 in Finland were started.
